Summary

Data Science & ML–focused Computer Science undergraduate with hands-on experience in AI automation and LLM systems. AI/ML Intern at StayChat AI building agentic and RAG-based solutions for hospitality workflows. Strong in Python, ML, data preprocessing, and AWS.

Experience

AI/ML Intern (StayChat AI) *January 2026- Present*

- Designing and developing intelligent, data-driven systems for automating hotel and hospitality workflows including bookings, cancellations, marketing offers, and front-desk assistance.
- Building Agentic AI + LLM-based pipelines that integrate retrieval (RAG), business logic, and ML models for real-time decision-making.

Projects

SMARTPANTRY *January 2026- March 2026 (Machine Learning + AI + NLP Project)*

- Built a full-stack AI-powered recipe recommendation engine using FastAPI and Streamlit that analyzes pantry ingredients and ranks recipes using a coverage-based matching algorithm to minimize missing ingredients.
- Developed an offline nutritional prediction pipeline using Scikit-learn with TF-IDF vectorization and Random Forest regression to estimate calories, protein, and fat for recipes missing nutritional data.
- Implemented NLP-powered natural language filtering and fuzzy ingredient matching, integrating Google Gemini to parse dietary constraints and dynamically generate customized cooking instructions.

CROP RECOMMENDATION SYSTEM *Feb 2024- April 2024 (Machine Learning Project)*

- Developed a system providing personalized crop recommendations based on location, temperature, rainfall, pH, and humidity, auto filled via weather API.
- Implemented Decision tree algorithm, KMeans algorithm. Achieved 97% accuracy using the Random Forest Algorithm.
- This Project helps farmers to reduce the chances of crop failures by recommending a crop that is best suited to their soil and the weather at their place.

SMART ATTENDANCE SYSTEM *Sep 2023- Dec 2023 (Machine Learning Project)*

- This Project learns the student's faces with the help of their images and name, so it can automatically mark them present through a webcam and updates the attendance in a csv file.
- It utilizes python libraries like open-cv, face_recognition, sci-kit learn
- This project reduces the number of false absentees and allows teachers/ professors to dedicate more time towards learning by eliminating the need for a manual roll call.

Certifications

- **Certifications & Training:** AWS Certified Cloud Practitioner (October 2025) , Data Scientist with Machine Learning Specialization- CodeCademy (December 2025), Data Analysis- Accenture (May 2024), IBM DevOps (May 2025).

Skills

- Programming & Data: Python, C++, SQL (MySQL) , Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Mlxtend, Cleaning, Preprocessing & Feature Engineering, spaCy.
- Machine Learning & AI: Supervised & Unsupervised Learning, Model Training, Evaluation & Tuning, LLMs(OpenAI / GPT-style models), Prompt Engineering, RAG (Retrieval-Augmented Generation), Agentic AI Systems
- Cloud Computing: AWS, Cloud Computing Fundamentals.

Education

- **Vellore Institute Of Technology**
  Bachelors Of Technology in Computer Science And Engineering – CGPA (8.3) *Bhopal, India (Expected 2026)*
- **Emirates Future International Academy**
  Senior Secondary School- XII CBSE (78.9%) *Abu Dhabi, UAE (July 2022)*
- **Abu Dhabi Indian School (Branch 1)**
  High School- X CBSE (85.6%) *Abu Dhabi, UAE (April 2020)*
